Mountain Performance

NEW

09353

Best in class fit and function make this sock stand out from the crowd. Optimum comfort and performance are ensured by Dri-release® wool, a unique fiber which keeps the feet comfortable, dry and odor free. In addition, the extra soft padding over the shinbone and the special support zones in the ankle area create an exceptionally comfortable feeling. The Cordura® reinforcements in the heel and toe areas deliver enhanced resistance to wear and polypropylene ensures optimal moisture management.

Snowboarding Freeride

NEW

09386

The socks are designed to meet the needs of freeriders of all skill levels. If you are tired of wet and cold feet, frozen toes and heels covered with blisters, this sock will solve all your problems.

All reinforcements are carefully studied in order to find the perfect combination of positioning, materials and density.

The K2 Freeride is more than just a sock, it is a second skin between your feet and your boots.

YARNS

Yarns

ACRYLIC

The synthetic fiber is soft, warm, lightweight, machine washable, fast drying and long wearing. It is resistant to shrinkage, sagging, stretching and does not itch. It is also excellent for cushioned products and has high wicking properties.

POLYAMIDE CORDURA®

For everything from casual day hikes and snowboarding to hunting and fishing. Cordura® fabrics offer outstanding durability in the great outdoors – no matter what the climate. Socks made with Cordura® fabrics have outstanding abrasion resistance.

DRI-RELEASE® WOOL

Combines the best of both worlds – the ease of care of a synthetic and the aesthetics of a natural fiber. Dri-Release® Wool – the latest development for optimum comfort and performance.

ELASTANE

The synthetic fiber is strong, lightweight, flexible, comfortable, machine washable and shape retentive. Elastane can stretch over five times its relaxed length and fully recover. A common trademark for elastane is Lycra®.

MERINO WOOL

The highest, finest and best type of wool obtainable. Merino wool is listed as a Class One wool. Merino Wool does not itch and is shrink treated to hold its size and shape.

MICROFIBRE

A very thin fibre with low maintenance and extremely elastic. These facts alone and its soft touch add to the high wear comfort. Microfibre is specially abrasion resistant and easy to care for.

POLYPROPYLENE

This synthetic fiber is lightweight, hydrophobic, durable and resilient. It has moisture transport properties.

RECYCLED POLYESTER STARLIGHT

PET is a precious commodity since it is made from oil or natural gas. Furthermore it can be 100% recycled. PET does not lose its characteristics in any substantial way, and can thus be repeatedly re-processed to make high value added products. Recycling PET also saves energy.

POLYAMIDE NANOGLIDE TM

NanoglideTM reduces the friction between the skin and fabric considerably, cools and dries quickly and decreases the risk of blistering and irritation of the skin.

COTTON

A soft heat-resistant vegetable fiber used in garments since 3.000 B.C. It absorbs and retains moisture, is readily washable and available in a wide variety of types and qualities. It can be up to one fifth of its weight in water before it actually feels damp. Long staple combed cotton is generally considered to provide the finest quality cotton yarn for socks.
